

A savory suite of financial products to satisfy your
sweet tooth

What is Pipsicle Finance?

We are a group of individuals seeking to build and provide a suite of financial tools easily accessible by the common investor. We have several years of experience regarding the ins and outs of the futures market allowing us to successfully develop safe and reliable strategies. We aim to achieve constant profit with our low-risk strategies enabling our investors to achieve stable passive income.

A Foundation Built on Integrity

Unfortunately, in this diverse market with infinite possibilities there are many individuals who take advantage of their investors by providing products and services built on top of nothing but dishonesty.

We strive to provide customer satisfaction with our strategies as well as a stress-free environment for our investors. Our customer service line will be accessible 7 days a week to provide live support. Any queries? Contact us now and our team will assist you.

Understanding Copy Trading

Copy trading allows you to directly copy positions initiated by another trader or algorithm. You decide how much you wish to invest in your broker of choice and copy our strategies in real time. The stop loss and take profit will be automatically set with each signal in order to protect your account and provide risk management. You will have the ability to decide on your lot size relative to your equity and therefore the risk to reward ratio will be at your discretion.

Sorbetto: GBP/USD Scalper

Our first strategy has been battle tested in many different environments in order to be safe and profitable. This strategy uses many different concepts to determine and follow current market trend. Users can expect 10-20 trades in a single trading day. This strategy aims for a daily goal of 1-5% with a low relative drawdown.

Specifications:

Take Profit:	80 pips
Trailing Stop Loss:	20 pips
Max Trades:	16
Execution Timeframe:	M15
Minimum Lot Size:	0.01
Suggested Leverage:	1:500 / 1:1000

Subscription Cost:

Single Account Monthly:	\$100 USD
Three Accounts Monthly:	\$200 USD
Unlimited Accounts Monthly:	\$400 USD
Yearly Access:	\$900 USD
Lifetime Access:	\$2000 USD
Social Trader Hosting Package:	Starting at \$20

How to Get Started

We are offering our strategies on the Social Trader Tools platform. Both MT4 and MT5 accounts are compatible. In order to subscribe you must select a broker of your choice and fund the account with the capital you would like to allocate to the strategy. In the case that you do not have a broker feel free to sign up with EnviFX using our affiliate link.

[Click Here For EnviFX Signup Link](#)

We recommend an ECN account with 1:1000 leverage if the latter is not available then 1:500 should be acceptable as well. Once your account is setup, please proceed with the following steps.

Connecting MT4/MT5 to Social Trader Tools

- 1) Select configurator on the drop-down menu to your left then navigate to accounts
- 2) Purchase a hosting package from Social Trader Tools platform
- 3) Select add account and fill in the requested details
- 4) On the accounts page verify that the connection was successful

Subscribing to The Strategy

To subscribe to the strategy, click on the following link and follow the instructions to provide payment.

Connecting MT4/MT5 to The Strategy

- 1) Select configurator on the drop-down menu to your left then navigate to trade copier
 - 2) Select Pipsicle Sorbetto as copy from and your MT4/MT5 as send to
 - 3) For risk type you **MUST** select **Lot Multiplier**
 - 4) For multiplier, please refer to the **Risk Management** section of this document
 - 5) Select **No** for copy existing trades
 - 6) Accept terms and conditions and select create copier
- 

Configuring The Copier

Once the copier has been created, follow these steps to configure the settings in the correct manner.

- 1) Navigate to Configurator then Trade Copier
 - 2) Select copier configuration represented by the gear icon on the right
 - 3) Select Risk Settings tab and set reverse trades to **No**
 - 4) Set risk type to **Lot Multiplier** if it isn't already
 - 5) Set multiplier according to the **Risk Management** guide
 - 6) Keep slippage and max lot as **Default** and min lot as **No**
 - 7) Select Stops & Limits tab and set all three values to **YES** this is very important
 - 8) Confirm everything is correct and save settings
 - 9) On the Trade Copier page, you can enable the strategy by clicking the red box (copier mode) and selecting **On**
-

Risk Management

The success of this strategy is derived from very specific risk management settings. In order to avoid any problems and/or loss please make sure you understand the following information. The master account is using the minimum lot size. You must set your lot multiplier according to your equity. Our master account is trading the with 0.01 lots.

Suggested Lot Size:

\$500-1K Capital:	0 .01 Lots
\$2K-4K Capital:	0.02 Lots
\$5K-7K Capital:	0.03 Lots
\$8K-10K Capital:	0.05 Lots
\$11K-12K Capital:	0.07 Lots
\$13K-15K Capital:	0.10 Lots
\$16K-18K Capital:	0.12 Lots
\$19K-20K Capital:	0 .15 Lots

You can use the following equation to calculate your lot size

$$\text{Lot Factor} = \frac{\text{Desired Lot Size}}{0.01}$$

Please be careful when selecting a lot size outside of our recommended range. You will increase the relative drawdown as a direct result therefore it's a must that you avoid red folder news.

Avoiding Red Folder News:

It's recommended that you disconnect the bot during any red folder news affecting USD or GBP and skip the whole session. The master account is running 24/5 regardless of news. In order to avoid drawdown, it's highly recommended to avoid news. You can view upcoming news events using the following: [Forex Factory](#)

The strategy is running 24/5 and you may enable/disable your copier as you please. Fridays are shorter days, and the bot is shut off early to avoid holding positions over the weekend.

Recommended Strategy:

Run the strategy according to market sessions and avoid a full session if there's red folder news to be expected. Sometimes it's better to avoid the full day if there's several red folder news events. It's also recommended to avoid the first Friday of every month as NFP can be very volatile.

A very conservative approach can be to trade a single session per day. An example would be Asian session which would be from 7PM EST to 2AM EST and sticking to our suggested lot guide.

We are aware that many will not follow the lot guide and use bigger position sizes and we cannot stop you from doing so. We suggest being mindful and increasing by small increments. Any loss occurred outside of our suggestions we will not be liable for. Long term gains and capital preservation is the type of experience we want to provide.

The following strategy is a partial hands-on approach, we will also be introducing our PAMM account with EnviFX which will be a completely hands off approach later in our roadmap.
